EMPATHY

- College students often struggle to access quality notes, especially before exams.
- Communication gaps between students from different departments or batches.
- Lack of a centralized space to ask academic or career-related questions.
- Difficulty in finding teammates for projects or collaborative work.
- Students want an engaging, interactive, and helpful peer-learning environment.

🎯 DEFINE

Problem Statement:

- Students face challenges in sharing academic resources, getting peer support, and collaborating effectively on projects due to the lack of a unified campus-based platform.

User Needs:

- A single platform for notes sharing, Q&A discussions, and project collaboration.
- Easy navigation, quick search, and real-time updates.
- A reward system (like a leaderboard) to encourage contribution and participation.

IDEATE

Ideas Generated:

- Centralized dashboard showing personal stats and community updates.
- Note-sharing module with filters and subject categorization.
- Interactive Q&A forum for peer-to-peer learning.
- Project collaboration hub to find or create team projects.
- Leaderboard and reward system for most active contributors.
- User profiles displaying badges, skills, and contributions.

Chosen Solution:

- An integrated Campus Connect Portal combining all these features in a clean, responsive web interface.

PROTOTYPE

Prototype Description:

- Built using HTML, CSS, and JavaScript (frontend).
- Includes four main modules:
  - Dashboard: Displays user stats and recent activities.
  - Notes Section: Upload, download, and rate notes.
  - Q&A Forum: Ask and answer categorized questions.
  - Projects Page: Collaborate on team projects.
- Each section includes search and filter features.
- Clean UI inspired by modern educational platforms.

🧪 TESTING

Testing Process:

- Plan to conduct user testing with students from different departments.
- Collect feedback on usability, design, and features through surveys and demos.
- Evaluate how well the portal supports note sharing, Q&A, and collaboration.
- Use insights to improve UI/UX and add new features before final launch.
